

# CLOUD MANAGED NETWORKS

**GAIN AGILITY WITH CLOUD MANAGED NETWORKS.**

Managing networks have traditionally been the realm of engineers, and locked up complicate looking screens. This has meant a lack of agility and visibility for organisations wanting simple outcomes - connecting users to the internet and apps. Fortunately it doesn't need to be that hard.

Our cloud managed networks offers you a choice of Wifi-as-a-Service or Network-as-a-Service. Depending on your needs, we'll provide wifi or an end-to-end network solution that includes internet and wide-area-network connectivity. You'll also have access to a web dashboard providing oversight of what is happening on your network. Simplicity and outcomes is what connectivity should be about.

## **SIMPLE DEPLOYMENT**

Plug and play deployment of new network locations and devices for rapid response to changing connectivity needs. Cloud managed devices load configuration automatically.

## **FAST FOR WORK**

Workplace networks need to perform well. Quality network equipment ensures connections and wifi can keep up with demand.

## **APPLICATION CENTRIC**

A business should be able to prioritise and report on simple things that matter like applications or websites. With 1000+ predefined applications, that's exactly what you get.

## **RICH VISIBILITY**

Drill down into information about network availability, performance and usage for full transparency into connectivity performance, and key business apps being used.

## **REAL MANAGEMENT**

Management of a network shouldn't be an abstract concept. Cloud managed networks have all the right dials to configure and maintain great network operations.

## **CENTRALISED MANAGEMENT**

Get a single pane of glass to view and manage connectivity, whether it be for multiple sites or devices.

# WHAT WE OFFER

## SCALABLE

Whether you have one office or multiple locations, cloud managed networks scale with your needs. Adding locations or extra network devices isn't a problem and doesn't detract from the simplicity of managing connectivity.

## UNIFIED

An integrated platform allows Wifi, switches and firewalls to all work together without the problems associated with mix-and-match solutions.

## AS-A-SERVICE

We offer cloud managed networks as either Wifi-as-a-Service, or end to end Network-as-a-Service which provides wifi, switches, firewall, WAN and Internet. You can also build your solution up as need.

## AGILE

We can provide a cloud managed network over any connectivity solution and offer Bring-Your-Own-Connection if you have existing ISP or mobile services.

## CHATOPS

We make it easy for you to contact us, with integrated chatops support acting as a direct line to our team of public cloud specialists. We also offer traditional means of contact.

## CLOUD CO-PILOT

We believe in supporting you and your team, not holding the controls at ransom. With co-pilot support, we work as a collective team, with full access and visibility to the tools we use.

**The Instillery is a leading NZ based public cloud service provider. We offer Cloud managed networks to bring the benefits of cloud to the connectivity world. Built for businesses who want connectivity that works.**
