

# PROTECT YOUR USERS

**BUILD SECURITY AROUND YOUR USERS, NOT YOUR OFFICE.**

Cloud has enabled a mobile workforce and employees can now work from anywhere - from different timezones to different devices. As a result, targeting end users has become a common means of compromising IT systems.

As the internet becomes the new corporate network, organisations should be able to ensure network security moves with users. Put a perimeter around your users, and with the most advanced cloud security platform available.

## **VISIBILITY AND CONTROL**

Gain visibility and control over cloud applications and shadow IT. Enhance user access for business applications using bandwidth control.

## **ADVANCED THREAT PROTECTION**

Increasingly sophisticated attacks target users, exploiting numerous methods. Advanced Threat Protection brings increased intelligence to block threats.

## **OFFICE 365 READY**

Optimised for Office 365, traffic is directly routed to Microsoft, and tweaked to provide the best user experience available, while staying secure.

## **UBIQUITOUS**

Security is available anywhere and anytime, on any connected device - users don't need to be in the office to be protected.

## **DATA PROTECTION**

Prevent intellectual property and corporate data from being stolen or lost with Data Leak Prevent, File Type Controls and Cloud Application controls.

## **PROXY AND NEXT GEN FIREWALL**

Security needs to be comprehensive. Deep content inspection and security across all ports provides a single platform to block network born threats.

## **SSL INSPECTION**

Over 50% of Internet traffic is encrypted, allowing malware to pass undetected unless SSL inspection is enabled. With cloud security you can turn on SSL Inspection without the impact on appliance performance.

# WHAT WE OFFER

## A SECOND PAIR OF EYES

We'll ensure the best security configuration for your needs, reviewing alerts and trends. We've secured cloud environments for an array of organisations, from financial services to the public sector, so we know what to look for.

## SCALABLE

Scaling is taken care of so it's easy to add new features, grow data use, or turn on SSL inspection.

## INTEGRATION

Supplement an existing network and/or security devices with simple standards based integration.

## VISIBILITY

Gain visibility of the traffic and services being used across a network. Report on departments, applications and threats.

## INTELLIGENT SECURITY

Cloud security learns from every user and every transaction, detecting new threats and blocking them for all.

## CLOUD CO-PILOT

We believe in supporting you and your team, not holding the controls at ransom. With co-pilot support, we work as a collective team, with full access and visibility to the tools we use.

## CHATOPS

We make it easy for you to contact us, with integrated chatops support acting as a direct line to our team of public cloud specialists. We also offer traditional means of contact.

**The Instillery is a leading NZ based public cloud service provider. If security in the cloud is paramount, we can lift the level of security controls and visibility, providing you with a second pair of eyes.**
